TRICVALVE®

TRANSCATHETER BICAVAL VALVES SYSTEM

THE ONLY COMPLETE SOLUTION FOR TREATMENT
OF TRICUSPID REGURGITATION USING CAVI.

P&F PRODUCTS & FEATURES
GmbH

TRICVALVE® – TRANSCATHETER BIVACAL VALVES SYSTEM

is a system of two self-expanding biological valves for the treatment of patients with hemodynamically relevant tricuspid insufficiency and caval reflux. The prostheses are implanted percutaneously into the inferior and superior vena cava without disturbing the native tricuspid valve. It is especially intended for use for patients at extreme risk or who are inoperable for open surgical therapy.
